CHAPTER 01

Executive Summary

What we are building, who it is for, and why it pays for itself.

Jones Excavating Co. is an 80-year Utah heavy-civil contractor specializing in excavation and utilities, founded in 1946. Callus Fabrication is its welding and custom-fabrication arm. Both companies do excellent work. Neither has a digital presence that reflects it.

This proposal lays out a coordinated plan for two distinct brands, two new websites, and a 90-day rollout to make both companies easier to find, easier to vet, and easier to hire than any regional competitor in their category.

What you get

- **One coordinated brand system** covering both companies — distinct identities that still read as a family.
- **Two production websites:** a refreshed jonesexcavating.com and a new callusfabrication.com.
- **Local SEO + Google Business Profile overhaul** to reposition both brands in the highest-leverage channel for this category.
- **Social media content engine** — LinkedIn-led, sustainable post-launch.
- **90-day fixed-price build**, with monthly retainer options for ongoing support and maintenance.

Why Act Now

Construction investment is at a decade high — putting a spotlight on exactly the specialized work Jones delivers. Now is the time to turn that market momentum into wins. A polished, modern digital presence positions Jones as the clear, credible choice for owners, GCs, and engineers, elevates you in search results, and helps you recruit the field and office talent needed to scale. Just one additional mid-size deep-foundation or shoring award can range from \$500K–\$5M+; if improved visibility and trust help Jones win even one new bid per year, this investment can pay back 10×–100×.

CHAPTER 02

The Opportunity

Where Jones and Callus stand against the Utah comp set today.

Before designing anything, we benchmarked Jones against the contractors you bid against. Two takeaways drive this entire proposal: **(1) LinkedIn is where Utah heavy-civil B2B happens**, and **(2) Google Business Profile, not the website, is the front door for local search**. Both are areas where Jones is currently underweight versus the comp set.

Utah heavy-civil LinkedIn footprint

LinkedIn is where commercial GCs, owners’ reps, and project managers vet contractors before short-listing. The Utah comp set has a clear digital footprint Jones can match within 12 months.

Company	LinkedIn	Founded	Notes
W.W. Clyde & Co.	7,065	1926	Clyde Companies
Staker Parson	~6,140	1952	Materials + civil
Geneva Rock Products	~6,000	1954	Clyde Companies
Sunroc / Suncore	~5,920	1937	Materials + civil
Whitaker Construction	2,100+	1953	ESOP, 700 employees
Jones Excavating Co.	~1,750	1946	← You are here

LinkedIn followings as of April 2026, rounded. Sources: company LinkedIn pages, agc-utah.org member directory.

Why this gap matters

- LinkedIn delivers **80% of B2B social leads** across all sectors and converts **2.74%** visitor-to-lead — 277% higher than Facebook or X.
- **89% of B2B marketers** use LinkedIn for lead gen and **40%** rate it their most effective channel.
- In Utah heavy-civil specifically, LinkedIn following runs roughly **33% higher** than Facebook for the same companies. That gap widens every year.

The Google Maps gap

For everyone who is not already on LinkedIn, the discovery moment is Google. And for service-area searches like "excavating contractor Utah" or "deep foundation Salt Lake City," Google Maps results sit **above** the website results. Whoever owns the map pack owns the lead.

Benchmark	Strong	Typical	Gap
Google review count (regional civil contractor)	100+	20–80	<10

Benchmark	Strong	Typical	Gap
Star rating (realistic ceiling, jobsite category)	4.5–4.7	4.0–4.4	<3.8
GBP photos (recent, geo-tagged)	40+	10–20	<5
Owner replies to reviews	100%	~50%	0%
Service area pages (linked from GBP)	8–12	3–6	0–2

Each additional Google review correlates with **+80 website visits, +63 direction requests, and +16 calls** per year for the average local business (BrightLocal, 2025). For a contractor whose average ticket is six figures, the unit economics are obvious.

ROI context

A single mid-size deep foundation or shoring contract can range from \$500,000 to \$5M+. If this digital presence helps Jones win just one additional bid per year that they would not have otherwise won, the return on this investment is 10–100×. The goal is not a nice website — the goal is a pipeline of better, larger bids.

CHAPTER 03

Brand & Web Strategy

Two brands, two sites, one coordinated team.

Jones and Callus are different businesses serving different buyers. They should look related — same family, same standards — without sharing a brand. The web work follows the same logic.

Jones Excavating Co. — Brand refresh

Jones already has equity. The orange J-mark is the most recognizable element you have, and 80 years of jobsite work back it up. The refresh sharpens the typography, modernizes the palette, and tightens the visual system without throwing away what people know.

- Logo: keep the orange mark; clean up the lockup and add a horizontal version for web/social.
- Palette: anchor on charcoal + Jones orange; add an amber accent for highlights and a clean off-white for type-heavy panels.
- Typography: bold condensed display + readable Inter body. Industrial feel, web-safe, performant.
- Photography: replace stock with on-site photos from active jobs (we run a half-day shoot in week 2).

Callus Fabrication — Brand build (Spark direction)

Callus is new enough to be designed deliberately. The Spark direction — industrial badge, dark steel, glove-and-spark mark, cropped-iron typography — lands the brand where its buyers already are: GCs, plant managers, foremen who hire welders by the hour or by the project.

- Logo: glove + spark mark, finalized, with horizontal lockup and stacked variant.
- Palette: black + spark red + amber, with charcoal and metal grays for depth.
- Voice: short sentences. Trade language. No corporate filler. "Built tough. Welded right."
- Family link: Callus carries a "backed by Jones Excavating Co." line in the hero, about, and footer — borrowing trust without diluting the new brand.

Web build — both sites

Both sites ship on the same modern stack so they are fast, easy to update, and friendly to Google. Each site is built page by page; nothing is template-glued.

Architecture

- Static-first build (HTML/CSS/JS) with a CMS layer for blog and project entries, so updates take minutes, not engineering tickets.
- Lighthouse 95+ targets for performance, accessibility, and SEO on every page.
- Mobile-first design (60–70% of contractor traffic is on phones).
- Schema.org markup baked into every page (LocalBusiness, Service, Project) so Google can read the site cleanly.

Page set

jonesexcavating.com

- Home (hero, services, projects, callout)
- Services (with sub-pages: excavation, shoring, deep foundation, trucking)
- Projects (case studies, filterable)
- About (history, leadership, equipment yard)
- Careers
- Service areas (Salt Lake, Utah County, Davis, Weber)
- Contact / Get a quote

callusfabrication.com

- Home (split hero, services, shop, projects)
- Services (mobile welding, MIG/TIG/Stick, line boring, OFC-A)
- Shop (capabilities, equipment, certifications)
- Projects (gallery)
- About / family of companies
- Service areas (Wasatch Front)
- Contact / 24-hour line

CHAPTER 04

SEO & Local Search

The highest-leverage channel for both brands.

For excavating and fabrication, the search journey is local-first: someone types a job-site need into Google, sees a map of local providers, and calls one of the top three. The website matters — but only after they have already found you on the map.

Google Business Profile — day-one work

- Claim and verify both GBPs (Jones is partially claimed; Callus needs to be added).
- Categorize precisely — primary plus all relevant secondaries (Excavating Contractor, Earthworks, General Contractor, Construction Services for Jones; Welder, Welding Supply, Custom Fabricator for Callus).
- Service areas: every Utah county you actually work in, with named locality pages on the website to back them up.
- Hours, contacts, attributes, accessibility, payment methods, languages — all filled, all consistent across the web.
- Photo backfill: 30+ recent geo-tagged jobsite photos uploaded in batch, then a steady cadence of 4–6 per month.
- Review program: outbound ask after every completed job, with a polite SMS template and direct GBP link. Goal: 100+ reviews on each within 12 months.
- Owner replies on every review (target: within 48 hours), positive or negative.

Technical SEO foundation

- Schema markup: LocalBusiness, Service, Project, FAQ on every relevant page.
- Site speed: Lighthouse 95+ across the board; image optimization, lazy loading, modern font delivery.
- Internal linking strategy mapping service pages to project case studies.
- XML sitemap, robots.txt, and Google Search Console + Bing Webmaster set up day one.
- NAP citations: name/address/phone consistent across 30+ directories (BBB, AGC of Utah, Yelp, BuildZoom, Procore, Yellow Pages, etc.).

Target keywords — first wave

Jones Excavating

- excavating contractor utah
- deep foundation salt lake city
- shoring contractor utah
- site work contractor west jordan
- drilling contractor wasatch front
- utility excavation utah county
- commercial excavation salt lake

Callus Fabrication

- mobile welder west jordan
- welding contractor utah
- custom fabrication salt lake
- mig welding wasatch front
- line boring utah
- industrial welding salt lake
- emergency welding utah

Outcome target

Within 6 months: top-3 map pack ranking for the first-wave keywords across the Salt Lake, Utah, Davis, and Weber county service areas. Within 12 months: 100+ Google reviews per brand at a 4.5+ star average, with steady review velocity.

CHAPTER 05

Social & Content

Where the comp set already lives — and where Jones can catch up fastest.

Two channels matter: **LinkedIn** (B2B vetting, PM-to-PM trust) and **Instagram** (jobsite proof points, recruiting, owner-to-owner credibility). Facebook is maintenance only. TikTok is not part of this plan.

LinkedIn — the priority channel

- Two channels: [linkedin.com/company/jones-excavating-co](https://www.linkedin.com/company/jones-excavating-co) already exists; we will refresh the page, banner, about copy, and post cadence. A new Callus company page launches with the website.
- Posting cadence: **3 posts/week per brand** mixing project milestones, behind-the-scenes shop/yard content, hiring posts, and short ownership notes.
- Employee advocacy: foremen, PMs, and ownership reshare from personal accounts. Single largest organic-reach lever in B2B construction.
- Targeted connection campaign: 50–100 thoughtful outbound connections per month (Utah GCs, owners' reps, developers, public works PMs).

Content pillars

Jones

- Jobsite milestones (with permission)
- Equipment in action (drone, B-roll)
- Crew spotlights / safety wins
- Project case studies (50/50 LinkedIn + site)
- Industry commentary from leadership

Callus

- Welding before/after (mobile + shop)
- Time-lapse fab work (CNC, plasma, line bore)
- Same-day service moments
- Crew skill spotlights
- Quick how-it-was-done write-ups

Instagram + Facebook

- Instagram leads on jobsite imagery and short-form video. Cross-posted to Facebook automatically (we will not run two separate content tracks).
- Reels: monthly time-lapse or build-progression video for each brand. Cheap to produce, high recruiting and credibility lift.
- Geo-tagging every post (site city + Utah) for local discovery.

Content engine

- Half-day quarterly content shoot at active jobsites + the Callus shop. One shoot feeds 8–10 weeks of posts across both brands.
- Shared content library (Dropbox or similar) so PMs and foremen can drop in raw photos and we do the editing.
- Monthly performance review: top posts, follower growth, engagement, lead-source attribution where possible.

Realistic 12-month targets

Jones LinkedIn: 1,750 → 3,500+ followers. Callus LinkedIn: 0 → 1,000+. Combined cross-platform reach: 5–10x current. Direct attributable inbound: 4–8 qualified leads per month per brand by month 9.

CHAPTER 06

The Marketing OS

An AI-driven marketing system you own, not an agency you rent.

Most marketing engagements end one of two ways: the agency keeps billing forever, or the client tries to take it in-house and the work quietly stops. Neither outcome is good for Jones or Callus. This chapter describes the third option.

The Marketing OS is a custom-built, AI-agent-driven system that automates 80% of the ongoing marketing work — social posts, review responses, SEO content, lead triage — while keeping a human (you) in the approval seat for every published artifact. We build it, we train it on your voice, and we hand it over. After 90 days you own a working system, not an agency dependency.

Why this is possible now

- AI models are now good enough to draft brand-voice content from a 2-sentence note + 3 photos sent by a foreman from a jobsite.
- Workflow tools (n8n, Make.com) can route those drafts into approval queues, post on schedule, and track performance without custom engineering.
- Google, Meta, and LinkedIn APIs are stable and accessible — we are no longer screen-scraping or fighting tooling.
- The result: marketing work that used to require a part-time hire can run on a 15-minute-per-day approval routine for an office manager.

The five agents

Five specialized AI agents handle distinct jobs. Each one drafts; a human approves. Nothing publishes without a click.

Field-to-Content Agent

A foreman or PM texts a number with photos and a short note ("Finished the Lehi sewer tie-in, biggest pour of the year, 14 hours"). The agent generates a LinkedIn post, Google Business Profile post, Instagram caption, blog snippet, and internal newsletter blurb — all in Jones or Callus voice. Office manager taps approve.

Reputation Agent

Watches Google reviews and Facebook recommendations across both brands. Drafts a brand-voice reply within hours, calibrated to the rating (gracious for 5★, measured-with-private-resolution-offer for 1–2★). Office manager approves; reply posts.

SEO Content Agent

Each month: pulls keyword movement, identifies 1–2 service-area pages or blog posts that would close ranking gaps versus the comp set, drafts the full page (H1, intro, sections, FAQ, meta description), and queues it for review. Closes the WW Clyde / Geneva content-depth gap over 12 months without a copywriter.

Lead Triage Agent

Sits behind the website contact form and (optionally) a site chat widget. Classifies inbound inquiries (excavation / fabrication / spam / general), extracts contact info and project signals, drafts an internal Slack-style alert and a 3-line auto-reply. Routes hot leads directly to estimating in under a minute.

Orchestrator + Approval Queue

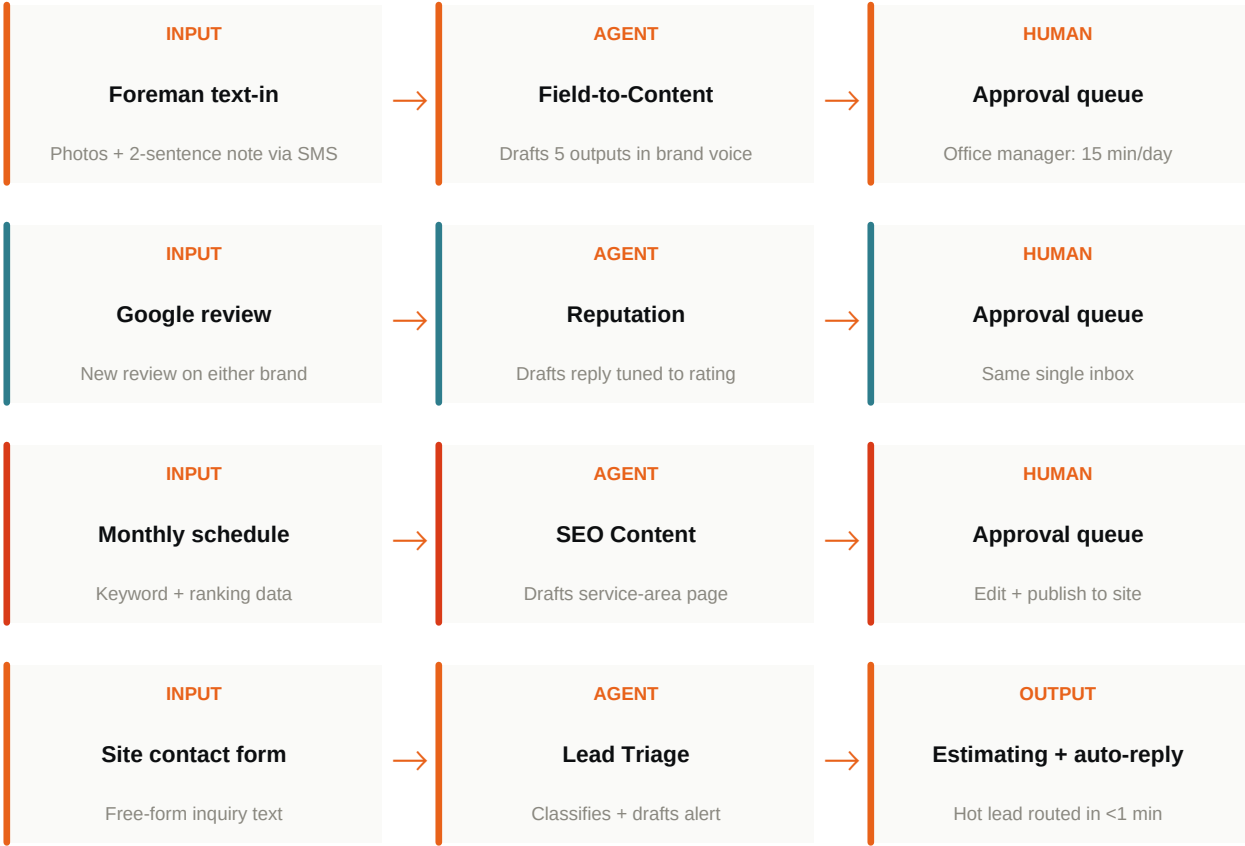

A central scheduler routes events to the right agent and lands all drafts in a single approval queue — one screen, one inbox, every brand. Approved items publish on the right cadence. Rejected items train the prompts.

What this replaces

A part-time marketing coordinator at \$50,000–\$70,000/yr fully loaded, or an agency retainer at \$1,500–3,000/mo. The Marketing OS does the same job with a 15-minute approval routine and roughly \$200/mo in infrastructure.

System architecture

The pipeline is intentionally simple. Each box is replaceable; nothing is locked in.

Underneath: Claude API for content generation, n8n for orchestration, Buffer/Later for scheduled posting, Google Business Profile + LinkedIn + Meta APIs for distribution, and a small SQLite store for the approval queue. Self-hosted; no monthly SaaS lock-in.

Three-phase ownership transfer

You do not buy this and figure it out. We run it with you, then alongside you, then behind you. By month 7 your office manager is running the system in 15 minutes a day and we are on a maintenance retainer.

Phase 1	Concierge	MONTHS 1–3	• We run the OS day-to-day while training it on your voice • 90 days of approved content captured as training data • Office manager observes; we document the SOP
Phase 2	Co-pilot	MONTHS 4–6	• Office manager runs the approval queue; we maintain the system • Weekly check-ins; we handle prompt tuning + integrations • Performance review at month 6 to right-size phase 3

Phase 3

Self-serve

MONTH 7+

- You run it. We are on retainer for system maintenance only
- Quarterly strategy review + prompt updates as Google/AI shift
- Cancel anytime; the system keeps running either way

What you own at the end

Working code, your tenant configuration, your brand voice profile, your prompts, your historical content library, and access to every API integration. If you ever want to take it fully in-house or move it to another vendor, you walk out the door with the whole system.

CHAPTER 07

Investment & Timeline

Fixed-price build, three-tier ongoing model.

Build phase — fixed price

Brand system — Jones	Logo refresh, palette, typography, usage guide.	\$3,500
Brand system — Callus	Full new identity build: mark, lockups, palette, voice, guide.	\$4,500
Website — jonesexcavating.com	7 templated pages + service-area pages. Performance build.	\$8,500
Website — callusfabrication.com	7 templated pages + shop section. Performance build.	\$7,500
SEO foundation (both)	GBP setup, schema, citations, technical audit, on-page.	\$3,500
Content shoot + initial library	Half-day jobsite + shop photo/video; 90-day post library.	\$2,500
Marketing OS build	5 agents, orchestrator, approval queue, brand-voice training, integrations.	\$12,000
Build phase total	One-time. 40% on signature, 30% at design approval, 30% at launch.	\$42,000

Ongoing — three tiers

Pick the tier that matches how hands-on you want to be. You can step down a tier any time after month 3 with 30 days' notice.

Concierge — we run it	Months 1–3 default. We operate the OS, you receive a monthly report.	\$1,900 / mo
Co-pilot — you run it, we maintain	Recommended for months 4–6. Office manager runs queue; we tune system.	\$850 / mo
Self-serve — system maintenance	Month 7+. Quarterly strategy review, prompt updates, integration patches.	\$350 / mo

Plus infrastructure: ~\$200/mo in API + hosting costs (Claude API, n8n hosting, scheduler, SMTP), billed at cost or paid directly to providers — your choice.

Timeline — 90 days to launch

01	Discovery + Brand	WEEKS 1–3	• Stakeholder interviews; site audit • Jones brand refresh; Callus brand build • Photography day at active jobsites + shop • Brand approval gate
02	Design + Build	WEEKS 4–9	• Both sites designed and built page by page • Content drafted with leadership input • GBP optimization + citation pass • Design and content approval gates
03	Launch + Activate	WEEKS 10–12	• Soft launch → final QA → hard launch • LinkedIn relaunch with refreshed pages and content • Review ask program activated for both brands • Retainer phase begins

CHAPTER 08

Next Steps

What we need to start, and when we can start.

Approvals required

- Sign-off on this proposal (this PDF + a brief MSA).
- Decision on Callus direction — the Spark direction is the recommended path and what the website concept reflects today.
- Designated point of contact at each company for weekly check-ins.

What we need from you

- GBP and social account access (or the green light to claim/create).
- Domain access for both jonesexcavating.com and callusfabrication.com.
- Two upcoming jobsites we can shoot in weeks 2–3.
- A list of 3–5 case-study-worthy projects from the last 5 years.

Kickoff

On signature we hold a 60-minute kickoff with leadership from both companies, agree on the first jobsite shoot date, and start the brand work the same week. The 90-day clock starts on signature.

A note on the work

Jones has built something real over four generations. Callus is a chance to build something new on top of that foundation. The deliverables in this proposal exist to serve that, not the other way around. If anything in here does not fit how you want to be in the world, tell us and we will adjust before we start. We work for you.
