

DIGITAL PROPOSAL

BRAND · WEB · SEO · SOCIAL

JONES EXCAVATING & CALLUS FABRICATION

A two-brand digital proposal covering brand, web, search visibility, and social for two Utah contractors.

PREPARED FOR

Jones Excavating Co.
Callus Fabrication

PROPOSAL VERSION

v5 · May 2026

STATUS

For Review

This proposal contains proprietary methodology and pricing, shared in confidence with Jones Excavating Co. leadership. Not for external distribution.

CHAPTER 01

Executive Summary

What we are building, who it is for, and why it pays for itself.

Jones Excavating Co. is an 80-year-old Utah heavy-civil contractor specializing in excavation and utilities, founded in 1946. Callus Fabrication is its welding and custom-fabrication arm. Both companies do excellent work; it is time their digital presence reflects it.

This proposal lays out a coordinated plan for two distinct brands, two new websites, and a 90-day rollout to make both companies easier to find, easier to vet, and easier to hire than any regional competitor in their category.

What you get

- **One coordinated brand system** covering both companies — distinct identities that still read as a family.
- **Two production websites:** a refreshed jonesexcavating.com and a new callusfabrication.com.
- **Local SEO + Google Business Profile (GBP) overhaul** to reposition both brands in the highest-leverage channel for this category.
- **Social media content engine** — LinkedIn-focused and sustainable post-launch.
- **90-day fixed-price build**, with options for ongoing support and maintenance.

Why Act Now

Construction investment is at a decade high — putting a spotlight on exactly the specialized work Jones delivers. Now is the time to turn that market momentum into wins. A polished, modern digital presence positions Jones as the clear, credible choice for owners, GCs, and engineers, elevates you in search results, and helps you recruit the field and office talent needed to scale. Just one additional mid-size deep-foundation or shoring award can range from \$500K–\$5M+; if improved visibility and trust help Jones win even one new bid per year, this investment can pay back 10×–100×.

CHAPTER 02

The Opportunity

Where Jones stands against competitors.

Before designing anything, we conducted market research. Two takeaways drive this proposal: **(1) LinkedIn is where Utah heavy-civil B2B happens**, and **(2) Google Business Profile is critical to building local awareness of your business**. Both are areas of opportunity for Jones and Callus.

LinkedIn Competitive Landscape

LinkedIn is where commercial GCs, owners' reps, developers, and project managers vet contractors before short-listing. Jones can become a player within this space within 12 months.

Company	LinkedIn	Founded	Notes
BHI	~19k	~2000	Excavation + construction
W.W. Clyde & Co.	~14k	1926	Clyde Companies
Staker Parson	~6,100	1952	Materials + civil
Geneva Rock Products	~6,000	1954	Clyde Companies
Sunroc / Suncore	~6,000	1937	Clyde Companies
Hadco	~1,300	1989	Excavation
Jones Excavating Co.	331	1946	Excavation, Shoring, Utilities

LinkedIn followings as of May 2026, rounded. Sources: company LinkedIn pages, agc-utah.org member directory.

Why this gap matters

- LinkedIn is where **80% of B2B social leads** come from, and it converts about **4×** better than Facebook or X for commercial work.
- **89% of B2B marketers** use LinkedIn for lead generation, and **40%** rate as their most effective channel.

Google Business Profile: Maximize SEO

Google Maps is where most buyers build their short list. When someone searches for any of your services (excavating, deep foundation, custom fabrication, welding), Google shows three local businesses at the top of the page, with star ratings, reviews, photos, and a tap-to-call button. That box appears before any regular search results. Miss that spot and Jones is invisible at the moment a buyer is ready to act. A strong Google Business Profile and an active review program earn it, building instant trust, driving inbound calls, and routing qualified traffic to the new website.

Benchmark	Strong	Typical	Gap
Google review count (regional civil contractor)	100+	20–80	<10
Star rating (realistic ceiling, jobsite category)	4.5–4.7	4.0–4.4	<3.8
GBP photos (recent, geo-tagged)	40+	10–20	<5
Owner replies to reviews	100%	~50%	0%
Service area pages (linked from GBP)	8–12	3–6	0–2

Each additional Google review correlates with **+80 website visits, +63 direction requests, and +16 calls** per year for the average local business (BrightLocal, 2025). For a contractor whose average ticket is six figures, the unit economics are obvious.

CHAPTER 03

Brand & Web Strategy

Two brands, two sites, one coordinated team.

Jones and Callus are different businesses serving different buyers. They should look related — same family, same standards — without sharing a brand.

Jones Excavating Co. — Brand refresh

Jones already has equity. The orange J-mark is the most recognizable element you have, and 80 years of excavation and utilities work back it up. The refresh sharpens the typography, modernizes the palette, and tightens the visual system while keeping core elements people know.

- Logo: keep the original mark; refresh the original and add a horizontal version for web/social.
- Palette: charcoal and orange as the core colors, with amber accents on highlights and a soft off-white background for sections with a lot of text.
- Typography: bold, condensed headlines paired with clean, readable body text. Industrial feel that loads fast on any device.
- Photography: add on-site photos and video from active jobs (we run a half-day shoot in week 2).
- Tagline: "Built for the Tough Jobs."

Callus Fabrication — Brand build (Spark direction)

Callus came to us with a solid starting point. We refined it into the Spark direction: an industrial badge feel, dark steel tones, a glove-and-spark mark, and rugged headline type. The brand speaks directly to the people who hire welders, including GCs, plant managers, and foremen working by the hour or by the project.

- Logo: glove + spark mark, with horizontal and vertical options.
- Tagline: "Built tough. Welded right."
- Family link: Callus carries a "Part of the Jones Family" line in the banner, about, and footer — borrowing trust without diluting the new brand.

Web build — both sites

Both sites will use modern technology so they are fast, easy to update, and search-friendly. Each site is built for the company's needs.

Built to save time and bring in leads

- **Update without a developer.** Add a new project, post a blog, or change a service description in minutes. The site stays current without becoming a chore for your team.
- **Built for the phone.** Most customers, GCs, and crew look at the site from the jobsite or the truck, not a desktop. Pages load fast and read cleanly on mobile — where the decision to call actually happens.
- **Found by Google.** Every page is structured so search engines recognize Jones, its services, and its projects, putting you in front of buyers searching for excavation work right now.

Page set

jonesexcavating.com

- Home page content and menu
- Company services and sub pages
- Projects (case studies, filterable)
- About (history, leadership, etc.)
- Careers
- Service areas
- Contact / Get a quote

callusfabrication.com

- Home page content and menu
- Company services and sub pages
- Shop (capabilities, equipment, certifications)
- Projects (gallery)
- About
- Service areas
- Contact / 24-hour line

CHAPTER 04

SEO & Local Search

The highest-leverage channel for both brands.

For excavating and fabrication, the search journey is local-first: someone types a job-site need into Google, sees a map of local providers, and calls one of the top three. The website matters — but only after they have found you on Google Maps.

Google Business Profile (GBP) — day-one work

- Claim and verify both GBPs (Jones is partially claimed; Callus needs to be added).
- Categorize your primary and secondary services (Excavating Contractor, Earthworks, General Contractor, Construction Services for Jones; Welder, Welding Supply, Custom Fabricator).
- List and claim all the service areas where you do business.
- Ensure hours, contacts, attributes, accessibility, payment methods, and languages are consistent across both businesses.
- Add 30+ recent geo-tagged jobsite photos in batch, then continue adding 4–6 per month consistently.
- Create a review program with a text template to send to clients after every completed job, with a direct GBP link.
- Set up a process so you can respond to all reviews quickly, positive or negative.

Technical SEO foundation

- Add structured data tags to every relevant page (business, services, projects, FAQs) so search engines can read your site cleanly.
- Tune every page for fast load times.
- Create smart internal linking so service pages connect to relevant project case studies, helping visitors and search engines find the right work.
- Connect your sitemaps to the major search engines (Google, Bing) so pages get indexed quickly.
- Ensure your business information is consistent across 30+ directories (BBB, AGC of Utah, Yelp, BuildZoom, Procore, and others).

Target keywords — first wave

Jones Excavating

- excavating contractor utah
- deep foundation salt lake city
- shoring contractor utah
- site work contractor west jordan
- drilling contractor wasatch front
- utility excavation utah county
- commercial excavation salt lake

Callus Fabrication

- mobile welder west jordan
- welding contractor utah
- custom fabrication salt lake
- mig welding wasatch front
- line boring utah
- industrial welding salt lake
- emergency welding utah

CHAPTER 05

Social & Content

Where the competition already lives — and where Jones can catch up fastest.

LinkedIn — the priority channel

- We will refresh the Jones LinkedIn page (banner, about copy, and post cadence) and create a Callus LinkedIn company page to launch with the website.
- Posting cadence: **3 posts/week per brand** mixing project milestones, behind-the-scenes shop/yard content, hiring posts, and short ownership notes.
- Employee advocacy: foremen, PMs, and ownership reshare from personal accounts to boost social engagement and amplify reach.
- Each month, send 50–100 personalized connection requests on LinkedIn to potential clients.

Content pillars

Jones

- Jobsite milestones
- Video and photo action shots
- Equipment in action (drone, B-roll)
- Crew spotlights / safety wins
- Project case studies
- Industry commentary from leadership
- Create a hype video

Callus

- Welding before/after
- Time-lapse videos
- Same-day service moments
- Crew skill spotlights
- Quick how-it-was-done write-ups
- Create a hype video

Instagram + Facebook

- **Instagram** is where younger Utah professionals spend their time. Posting jobsite photos and short videos here puts Jones and Callus in front of the next generation of GCs, project managers, and field workers you want to hire.
- **Facebook** still reaches the older Utah professionals, local community pages, and crew families who share what they see. Everything cross-posts from Instagram automatically, so you get both audiences without doing the work twice.
- **Reels (short videos)**: one per brand each month showing a time-lapse pour, a build progression, or equipment doing what it does. Cheap to produce, and the single biggest credibility and recruiting lift available on social media.
- **Tag every post with the jobsite city and "Utah"** so people in your service area discover you when they search nearby. Free visibility that compounds month over month.

Content engine

- **We provide professional photography and videography.** Drone, jobsite, and shop coverage captured during quarterly half-day shoots, with one shoot feeding 8–10 weeks of posts across both brands.
- **We engage your team so they can send us content easily.** Foremen and PMs drop in photos and short clips from the field, and we handle the editing.
- **We run monthly performance reviews.** We look at top posts, follower growth, and engagement, then adjust each month so it keeps getting better.

REALISTIC 12-MONTH TARGETS

With and without the Marketing Operating System

How far Jones and Callus get on the static buildout alone vs. with the full system running.

JONES

PLATFORM	WITHOUT	WITH MOS	LIFT
LINKEDIN	600	1,100	1.83×
INSTAGRAM	600	750	1.25×
FACEBOOK	215	300	1.40×

CALLUS

PLATFORM	WITHOUT	WITH MOS	LIFT
LINKEDIN	400	550	1.38×
INSTAGRAM	190	350	1.84×
FACEBOOK	100	200	2.00×

AVERAGE LIFT WITH MARKETING OS

1.6× more followers across both brands

CHAPTER 06

The Marketing Operating System

A marketing system you can manage, not an agency you rent.

Most marketing engagements end one of two ways. The agency keeps billing forever, or the client tries to take it in-house and the work quietly stops. Neither outcome is good for Jones or Callus. This chapter describes the third option.

The Marketing Operating System is a custom-built system that automates roughly 80% of the ongoing marketing work: social posts, review replies, SEO content, and lead triage. A human (you) approves every item before it publishes. We build it, train it on your brand voice, and hand it over. After 90 days you have a working system, not an agency dependency.

Why this is possible now

- Modern AI tools are good enough to draft brand-voice content from a two-sentence note and three photos sent by a foreman from a jobsite.
- Today's workflow tools can route those drafts into approval queues, post on schedule, and track performance without custom engineering.
- Google, Meta, and LinkedIn now offer stable connections so we can publish to them reliably, without workarounds.
- The result: **MARKETING WORK** that used to require a part-time hire can run on a 15-minute-a-day approval routine for an office manager.

Your five AI agents

Five specialized AI agents handle distinct jobs. Each one drafts. A human approves. Nothing publishes without a click.

Field-to-Content Agent

A foreman or PM sends photos and a short note via text message ("Finished the Lehi sewer tie-in, biggest pour of the year, 14 hours"). The agent generates a LinkedIn post, Google Business Profile post, Instagram caption, blog snippet, and internal newsletter blurb, all in Jones or Callus voice. Office manager taps approve.

Reputation Agent

This agent watches your Google and Facebook reviews on both brands. When a new review comes in, it drafts a reply in your brand voice and adjusts the tone to match the rating. A 5-star review gets a friendly thank-you. A 1- or 2-star review gets a measured response with a private offer to resolve the issue. The office manager approves and the reply posts.

SEO Content Agent

Each month, this agent looks at how your search rankings are changing, finds one or two pages or blog posts that would help you compete better in your service areas, drafts the full content, and sends it to you for approval. Over 12 months, this closes the search gap between you and your competitors without hiring a copywriter.

Lead Triage Agent

This agent classifies inbound inquiries into excavation, fabrication, spam, and general categories. It extracts contact info and potential project info, then drafts an internal message alert and a 3-line auto-reply. Hot leads are routed directly to you in under a minute.

Orchestrator + Approval Queue

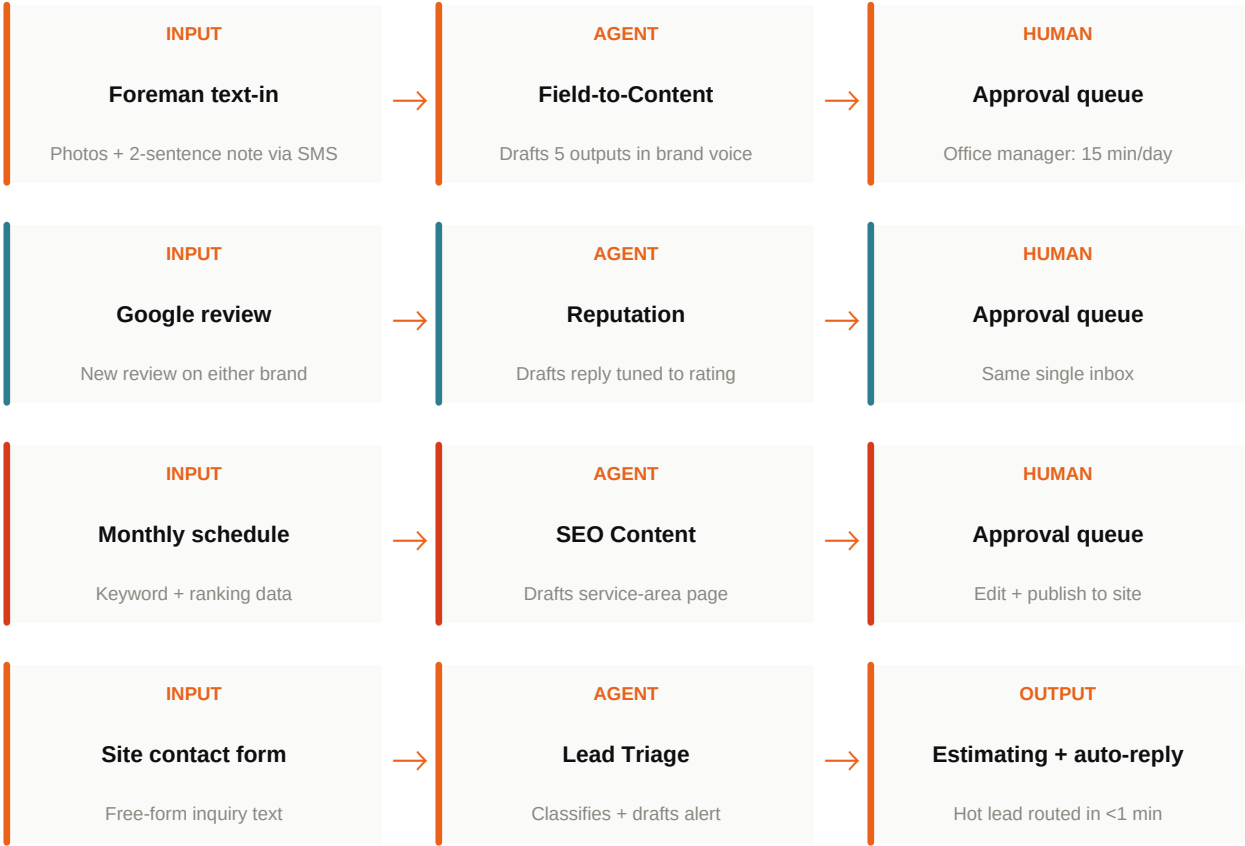

A central scheduler routes events to the right agent and lands all drafts in a single approval queue: one screen, one inbox, every brand. Approved items publish on the right schedule. Rejected items improve the prompts inside each agent.

What this replaces

A part-time marketing coordinator at \$50,000 to \$70,000 per year fully loaded, or an agency retainer at \$1,500 to \$3,000 per month. The Marketing Operating System does the same job with a 15-minute approval routine and roughly \$200 per month in infrastructure.

System architecture

The pipeline is intentionally simple. Each box is replaceable; nothing is locked in.

Built on modern technology with direct connections to LinkedIn, Google Business Profile, and Meta.

Three-phase ownership transfer

You do not buy this and figure it out. We run it with you, then alongside you, then behind you. By month 7 your office manager is running the system in 15 minutes a day and we are on a maintenance retainer.

Phase 1	Concierge	MONTHS 1–3	• We run the system day-to-day while training it on your voice • 90 days of approved content captured to teach the system how you sound • Office manager observes while we document everything on how to run the system
Phase 2	Co-pilot	MONTHS 4–6	• Office manager runs the approval queue while we maintain the system • Weekly check-ins while we handle voice tuning and integrations • Performance review at month 6 to right-size phase 3

- Phase 3

Self-serve

MONTH 7+

- You run it. We are on retainer for system maintenance only
 - Quarterly strategy review and updates as Google and AI tools change
 - Cancel anytime. The system keeps running either way

What you own at the end

You own all your data, content, brand identity, and historical drafts. To keep operating the Marketing Operating System, you can stay on the \$350/mo Self-serve retainer or pay \$150/hour for support, whichever is less. Move on whenever you want, and your data, content, and brand work come with you.

CHAPTER 07

Investment & Timeline

Fixed-price build, three-tier ongoing model.

Build phase: fixed price

Brand system: Jones	Logo refresh, palette, typography, usage guide.	\$3,500
Brand system: Callus	New brand identity from the ground up: logo system, palette, tone of voice, and brand guidelines.	\$4,500
Website: jonesexcavating.com	7 templated pages plus service-area pages.	\$8,500
Website: callusfabrication.com	7 templated pages plus shop section.	\$7,500
SEO foundation (both)	Google Business Profile setup, structured data, business listings, technical audit, on-page work.	\$3,500
Content shoot + initial library	3-day shoot at Jones sites and 1-day shoot at Callus shop. Photo and video, plus a 90-day post library.	\$8,000
Hype video: Jones	Branded hype video edited from shoot footage. ~10 hours of editing.	\$1,000
Hype video: Callus	Branded hype video edited from shoot footage. ~10 hours of editing.	\$1,000
Build phase total	One-time. Static buildout: brand, websites, SEO foundation, and content library.	\$37,500

Marketing Operating System

A separate, one-time build that delivers the agents, approval queue, and integrations. Operated under a monthly retainer (three tiers below) that covers ongoing support and maintenance.

Marketing Operating System build	Five agents, central scheduler, approval queue, brand-voice training, and integrations.	\$12,000
Combined build total	Build phase (\$37,500) plus Marketing Operating System build (\$12,000). 40% on signature, 30% at design approval, 30% at launch.	\$49,500

Marketing Operating System retainer: three tiers

Pick the tier that matches how hands-on you want to be. You can step down a tier any time after month 3 with 30 days' notice.

Concierge: we run it	Months 1–3 default. We operate the system and you receive a monthly report.	\$1,900 / mo
Co-pilot: you run it, we maintain	Recommended for months 4–6. Office manager runs the queue while we tune the system.	\$850 / mo
Self-serve: system maintenance	Month 7+. Quarterly strategy review, voice updates, and integration patches.	up to \$350 / mo \$150/hour, whichever is less

Plus infrastructure: ~\$200/mo in API + hosting costs (AI provider, hosting, scheduler, email), billed at cost or paid directly to providers, your choice.

Timeline: 90 days to launch

01	Discovery + Brand	WEEKS 1–3	- Stakeholder interviews; site audit - Jones brand refresh; Callus brand build - Photography day at active jobsites + shop - Brand approval gate
02	Design + Build	WEEKS 4–9	- Both sites designed and built for each company's needs - Content drafted with leadership input - Google Business Profile setup and business listing pass - Design and content approval gates
03	Launch + Activate	WEEKS 10–12	- Soft launch → final QA → hard launch - LinkedIn relaunch with refreshed pages and content - Review ask program activated for both brands - Retainer phase begins

CHAPTER 08

Next Steps

What we need to start, and when we can start.

Approvals required

- Sign-off on this proposal (this PDF and a brief Master Service Agreement).
- Decision on Callus direction. The Spark direction is the recommended path and what the website concept reflects today.
- Designated point of contact at each company for weekly check-ins.

What we need from you

- Google Business Profile and social account access (or the green light to claim/create).
- Domain access for both jonesexcavating.com and callusfabrication.com.
- Two upcoming jobsites we can shoot in weeks 2–3.
- A list of 3–5 case-study-worthy projects from the last 5 years.

Kickoff

On signature we hold a 60-minute kickoff with leadership from both companies, agree on the first jobsite shoot date, and start the brand work the same week. The 90-day clock starts on signature.

A note on the work

Jones has built something real over four generations. Callus is a chance to build something new on top of that foundation. The deliverables in this proposal exist to serve that, not the other way around. If anything in here does not fit how you want to be in the world, tell us and we will adjust before we start. We work for you.
